

Read Me CERES4.50.15 ADCS Pallet Consolidation Unit Weight (Ceres4.50.15)

Service Request or Support:

Issue addressed: The ADCS Pallet Consolidation process allows for the consolidation of differing lots (of the same item). During the consolidation process the unit gross weight for the lot associated with the pallet being consolidated is recalculated as the average of the weights for the two lots involved in the consolidation. This can lead to distributions (of the consolidated lot) having a different unit gross weight than its associated inbound layer.

Type	ID	Name
Codeunit	14012306	Miniform Pallet Consolidation

This release does not present a change in system usage methodology.

Resolution: Ceres was enhanced to address the reported issue by performing a check before the pallets are consolidated to ensure that the unit gross weight matches for the two lots involved in the consolidation. If the weights do not match, an error messages such as the one shown below will be displayed on the hand held and the pallet consolidation process will not be completed.

The selected Pallets cannot be consolidated. Unit Gross Weight must be the same for Lot=LOT-02894 (11.5 lbs) and Lot=LOT-02893 (15 lbs).
