# Read Me_CERES4.50.62_ Quantity Available Performance Analyzer (Ceres4.50.62)

Service Request or Support: SR-0002336

   Issue addressed: It is requested that a non-invasive toolkit and procedure be provided to record metrics related to quantity available calculation. The toolkit should record the processing time for calculation operations at the function, function task, and overall calculation level. The toolkit should provide for recording this information as a standalone run (not monitoring of batch processes but rather monitoring of a single quantity available calculation process).

See Service Request SR-0002336 for more information.
