

Read Me CERES4.50.63 ADCS Multiple Locations (Ceres4.50.63)

Service Request or Support:

Issue addressed: Users are unable to access more than one location via handhelds. The error, "Location does not exist" is encountered even though the user is setup as a warehouse employee for the desired Location.

Type	ID	Name
Codeunit	14012280	Miniform Logon (Ceres)

This release does not present a change in system usage methodology.

Resolution: Ceres was enhanced to address the reported issue by providing the ability for users to access all of the locations for which the user is configured as a warehouse employee.

Note: Prior to this release, the Warehouse Employee record having the Default flag checked would only default the related location on the hand held if the ADCS User ID matched the User ID in the Warehouse Employee record. This caused many sites to create non-windows user accounts to allow the location to default on the hand held. With this release, the default location of default to the hand held based on the Warehouse Employee record where the "ADCS User" matches the Name of the ADCS User record.
