

Read Me Ceres4.51.28 Validate Account Name field for the Get Standard Journals Process (Ceres4.51.28)

Issue addressed: The Get Standard Journals process does not validate any fields on the general journal line thus the "Account Name" field is never being set. Appears to only affect Standard Journals saved before the Account Name field was added

Objects Affected:

Type	ID	Name
Table	750	Standard General Journal

This release does not present a change in system usage methodology.

Resolution: With this release, Ceres has been enhanced to address the reported issue by validating the General Journal Line Account Name field. Standard Journals that were saved before the Account Name field was added to the General Journal Line Table are now accessible.
