

Read Me Ceres4.51.31 Copy Document: Agency Order, Donation Order
(Ceres4.51.31)

Issue addressed: If copy document is used to copy one open agency order to another agency order for a different agency, the system always shows an error that the Quantity on the sales line is greater than the available Quantity of zero. Also, attempting to copy from a posted donation receipt or posted donation invoice to a new donation order, a message is incorrectly displayed related to the quantity available for return.

Objects Affected:

Type	ID	Name
Codeunit	6620	Copy Document Mgt.

This release does not present a change in system usage methodology.

Resolution: With this release, Ceres has been enhanced to address the reported issues by recalculating the Item Quantity from the copied agency order. When copying line items from an existing agency order to a new order, the Item's Quantity is validated which decrements the Available Quantity on the new order. As the pallet and lot must be selected on the new order, the Quantity Available and Quantity to Order are subject to change based on the pallet and lot selected.

When copying a posted Donation Invoice or Receipt, Return Orders, and Credit Memos Item line quantities are no longer validated. Item lines can now be copied from a posted donation receipt or posted donation invoice to a new donation order. Pallets must be selected or created on the new donation order.
