

## Read Me Ceres4.51.32 Validate Branch Code and Location Code on DO, PO and Agency Group (Ceres4.51.32)

Issue addressed: There is an inconsistency in how the Location and Branch behave in Ceres 2009 and in Ceres 4.5. The agency orders are populating the location as expected, but the Donation Order and Purchase Order are not. The prior behavior was that the location was populated first, then branch so that the default location on the branch was populated instead of the default location on the Vendor or Donor. Also, it was noticed that the branch code is not populating on the agency group code. When you create a new agency group, you select a location code. When the location code is selected the Branch on that location should be populated to the agency group code.

### Objects Affected:

Type	ID	Name
Table	38	Purchase Header
Table	14012331	Agency Group

This release does not present a change in system usage methodology.

Resolution: With this release, Ceres has been enhanced to address the reported issues by validating the Branch Code (Responsibility Center) prior to the Vendor's Location Code so that if a location is defined on the Vendor/Donor then that is the location that will default to the order. Additionally, when creating a new Agency Group, Branch Code is populate based on the selected location.
