

## Read Me 4.51.43 Ability to Utilize GTIN Functionality without using Web Services

### (Ceres4.51.43)

Issue addressed: When using GTIN functionality but not using the Web Service to obtain the GTIN Code, if the "Web Service URL" field on GTIN Setup is left blank, the user receives the following error when entering a new GTIN Code on a Purchase Order or Donation Order Line:

"The SELECTSTR comma-string does not contain a value for index 3."

GTIN needs to be able to be utilized without the Web Service functionality so a Food Bank can manually create GTIN records.

Objects Affected:

Type	ID	Name
Table	37	Sales Line
Table	39	Purchase Line
CodeUnit	14012259	GTIN Management
CodeUnit	14012265	GTIN Web Management

This release does not present a change in system usage methodology.

Resolution: With this release, Ceres has been enhanced to address the reported issue by updating the "GetGTINFromWebService" function in GTIN Web Management (CU 14012265) to exit the function if the Web Service URL field on GTIN Setup is blank and an updating function "GetGTINMasterFromFAdb" in GTIN Management (CU 14012259) to manage error messaging. Also a few minor adjustments were made in the Sales Line and Purchase Line tables regarding the GTIN Code field validation.
