

## Read Me 4.51.49 Improved Item Data Management (Ceres4.51.49)

Issue addressed: Ability to manage Item elements by groups of Items instead of individual items. Currently a user has to update item fields on a per Item basis. A batch routine is to be created to accomplish Item data updates. The process should allow the user to select any item field(s), that can be changed manually, and allow change of those fields for multiple Items.

See SR-0002436 (Improved Item Data Management).

### Objects Affected:

Type	ID	Name
Table	14012336	Item Update Field
Report	14012332	Item Batch Update
Codeunit	14012332	Item Batch Update Mgt.
Codeunit	14012333	Item Update
MenuSuite	1052	Dept - Ceres
Page	14012335	Item Update Field List
Page	14012336	Item Update Lookup List

This release does present a change in system usage methodology. The following procedure document has been created:

### Item Data Management

Resolution: With this release, Ceres has been enhanced to address the reported issue by implementing functionality to improve the update of items by creating a processing-only report that will allow users to update fields on item records, in a batch run.

The Item Batch Update report link can be found under: Departments/Warehouse/Inventory/Reports->Item Batch Update.
