

Read Me Ceres4.51.75 Agency Days and Hours Enhancement (Ceres4.51.75)

Service Request or Support Case: SR-0002531

Issue addressed: The Frequency field on Agency Days and Hours Table was of Data Type Text and has been used for purposes unrelated to Frequency. Feeding America requested the ability to purge the current contents of the Frequency field and the ability to import a text file with frequency options.

Note: This release requires data in the Frequency field of the Agency Days and Hours table to be purged in order to facilitate the data type change for the Frequency field. This means that the implementation of this release will result in a loss of data (e.g. the Frequency field of the Agency Days and Hours). Sites are encouraged to copy all data (rows) from the Agency Days and Hours table (directly) and to save the data in Excel for reference.

Note: See implementation notes below.

Note: After implementing the Ceres version under which this request is released, the objects listed below must be compiled in order to prevent potential run time errors related to the change in data type for the Frequency field.

Objects Affected:

Type	ID	Name
Table	14012358	Days and Hours Frequency
Table	14012364	Agency Days and Hours
Page	14012492	Days and Hours Frequencies
Report	14012338	Purge Frequency
XMLport	14012258	Import Day and Hours Freq.

This release presents a change in system usage methodology. The following procedure documents were updated accordingly.

1. Agency Days and Hours Setup.docx

Resolution: Ceres was enhanced to address the request. See the noted Service Request for more information.

Implementation Notes

Implementation of this release assumes that site customization does NOT exist on the Agency Days and Hours table. If this is not the case, it is recommend that you contact eSoftware Support for assistance before implementing this release.

This release contains a two part fob ('a' and 'b'). The 'a' fob should be imported first and the "Purge Frequency" (ID: 14012338) run directly from the object designer to clear data in the Frequency field of the Agency Days and Hours table. After running the "Purge Frequency" report the 'b' fob should be imported with the Replace All option.

When presented with the dialog shown below, choose the Synchronize Schema option of “Force” and then the OK button to continue.
