

Read Me 4.51.84 Qty to Invoice reset on Delivery Charge when AO posting interruption (Ceres4.51.84)

Service Request or Support: N/A

Issue addressed: When Automatic Delivery Charge Calc. on Agencies & Receivables setup is set to No and a Pick, with a posting date that is outside of the users posting date range, is attempted to be posted (Delivery Charge has already been calculated on the related Agency Order), an error will occur and the Qty. to Ship and the Qty. to Invoice on the Agency Order for the Delivery Charge line is blanked out, so the line does not get posted when the Agency Order is posted.

Type	ID	Name
Table	36	Sales Header
CodeUnit	80	Sales-Post
CodeUnit	81	Sales-Post (Yes/No)
CodeUnit	7324	Whse.-Activity-Post
CodeUnit	14012376	Whse. Doc. Show Preview

This release does not present a change in system usage methodology.

Resolution: Ceres was enhanced to address the reported issue by implementing a Preview Posting option for Warehouse posting, to avoid posting errors before posting. Updates were made to:

- CodeUnit 80 (Sales-Post), to relocate code related to Warehouse Handling and prepare for Preview Post option for Warehouse Act. Posting.
- Sales Header table (36): added 'Preview Post' field.
- CU-81 (Sales-Post (Yes/No), to prepare for Preview Post option for Warehouse Act. Posting.
- CU-7324 (Whse.-Activity-Post), to prepare for Preview Post option.
